

DEPARTMENT MANAGEMENT SYSTEM

ABSTRACT

The main project is a Web application, to manage the department activities and the data including student details such as their marks, attendance, activity points, resume, skill sets and faculty details.

Students are able to check their marks and attendance and they can also upload the certificates for activity points. These will be verified by the staff advisors. Students can give feedback about the faculties. They can also analyse their performance in the academics. The application helps to find the area where the student is weak and recommends the materials to improve themselves.

The faculty can manage and control the student database. They are responsible for updating student's attendance and marks. They can also analyse individual student performance as well as performance of entire class based on their marks and other academic activities. HOD can manage the entire department database, take the necessary actions based on the feedback of the students, update faculty details and analyse the performance of the students.
